Selectic ViT 1500 VGA

Selectic ViT 1500 VGA

Selectic ViT 1500 VGA

Description

The SFK Selectic ViT terminal is developed for use in the meat industry where the demands on sturdiness, hygiene and easy servicing are very high.

The Selectic ViT is intended for use in industrial production environments for data collection or as operator panel for an overall data system. Consequently, the terminal is manufactured with parts from leading manufacturers of electronic components for industrial use. Furthermore, the Selectic ViT is made of corrosion-resistant materials, approved for use in the food industry (FDA approved).

The touch screen is placed behind a laminate film which leaves a very small edge between film and screen, with minimal risk for collection of dirt and water.

Designed with large, plane surfaces, round corners and slanting sides, this terminal is very easy to clean.

The big 15" touch screen is ideal to users for registration and documentation of production data.
